

WHO THIS IS FOR

R&D teams

Organise product evidence and frame a bounded internal pilot.

IPGuru is an AI invention platform: a guided conversation with a crew of specialist AI agents that takes an idea from first thought to a validated, documented, protectable result. The full story is on the back of this page.

RECOGNIZE YOURSELF?

- ✓ Solved problems live in lab notebooks and leave the company when people do.
- ✓ Your IP committee receives disclosures of wildly varying quality and completeness.
- ✓ Invention disclosure forms compete with the next technical problem, and lose.
- ✓ You want to prove a better process on one team before changing anything company-wide.

WHAT YOUR TEAM WALKS AWAY WITH

Five gated steps: the FORGE method, proprietary to IPGuru. You approve the evidence at every gate, and each step hands you something real:

FOCUS

The disclosure, extracted in conversation.

Nova interviews the inventor the way a patent engineer would. Twenty minutes of talking replaces the form nobody fills in.

OBSERVE

Prior art attached to every disclosure.

Each one searched against 250M+ patents before the committee sees it, so meetings run on evidence instead of recollection.

REFINE

Standardized, reviewable files.

Uniform disclosure documents with figures, 3D models and short explainer videos, so a review board compares like with like.

GRADE

Every disclosure scored against one rubric.

Weak disclosures fail fast and cheaply. Strong ones arrive at counsel credible, with the reasoning attached.

EXECUTE

Committee-ready output with the inventor on record.

A complete file for counsel or the IP committee, carrying the full evidence trail and the name of the person who solved it.

SiteWatch AI drone: a field-equipment concept, rendered for the disclosure that describes it.

Greenfield

Start from a brand-new idea, however rough.

Brownfield

Start from the product you already make or sell.

Private by default

Your ideas stay confidential until you choose otherwise.

Teams typically start with a bounded pilot: one team, one quarter, three candidate disclosures from the existing backlog, compared against what the current process produced last year.

Frame a bounded pilot, at ipguru.ai

What is IPGuru?

An AI invention platform, live today at ipguru.ai and invent.sg. You describe an idea in conversation. Nova, the guide, and a crew of specialist AI agents research it, test it, visualize it and turn it into a documented, examinable result: an invention validated against the world's patents, drafted for your country and scored before anyone official sees it.

WHY IT EXISTS

3.5%

Of US patents go to individual people. Companies hold 89.1%, universities and government 7.4%. Almost everyone else is priced out before they start.

US\$15–30k

What preparing one application traditionally costs in professional fees, before anyone knows if the idea is even new.

~US\$70

The US patent office's own micro-entity filing fee. Cost is not the barrier. The work in front of it is. IPGuru does that work.

FROM IDEA TO RENDERED CONCEPT, ON THE PLATFORM

The Birdfeeder Defense System. A backyard argument with the squirrels, worked through every FORGE gate on the site today: concept, prior-art position, renders and a drafted application.

The StoveGuard Fire Suppressor. The other path in: an existing product and a safety complaint, turned into a rendered, examined improvement.

The five FORGE steps that produced these, and what each one delivers for you, are on the front of this page.

WHAT THE PLATFORM PRODUCES

- Structured invention disclosures, extracted through guided conversation
- Market, competitor, novelty and feasibility assessments
- 3D models and short videos, from concept to demonstration
- Mock examinations against 300 scored templates
- Trade-secret records and defensive publications where filing is the wrong call
- Classroom templates, rubrics and per-student progress views
- Prior-art search reports across 250M+ patents, five languages translated
- Concept art, 2D drawings and product-in-use renders in one visual identity
- Formal patent figures, claims and descriptions for your jurisdiction
- Finished filing packs: PCT or national, self-file or attorney-ready
- Grant applications built on the same evidence base
- Delivered through local, branded portals in each market

1,150+ specialist agents work behind Nova, among them 789 domain experts across 14 industries, 355 professional virtuosos for writing, figures, modelling and examination, and a patent crew tuned to each filing jurisdiction.

WHY NOT JUST USE CHATGPT OR CLAUDE?

A proprietary method.

Five gated FORGE phases, one scorecard, every time.

Measured quality.

300 scored templates and a mock examination.

Embedded prior-art search.

250M+ patents searched semantically, not guessed at.

Consistent visuals.

One identity from concept art to figures, 3D and video.

Tested, not flattered.

Patentability, feasibility and the competitive landscape.

A finished pack.

Drafted for your jurisdiction, bound for your attorney.

Know before you spend.

The platform's promise in one line: know if your idea is worth protecting before you spend a dollar. Evidence first, decisions second, money last.

Private by default.

Your ideas and drafts stay confidential until you choose otherwise, and you own every word, figure and model the platform produces with you.

PAGES LIKE THIS EXIST FOR **Solo inventors • Founders • SMEs • R&D teams • Students & researchers • Teachers • IP attorneys**

Inventing should be for everyone.

You own what you create; the platform claims no ownership or license over your work. IPGuru prepares; it does not give legal advice, and it works alongside patent attorneys.
